Contribution ID : 37

Type : **Oral Presentation**

Diffusion of conserved charges in relativistic heavy ion collisions.

Tuesday, 7 February 2023 15:00 (15)

Bulk matter produced in heavy ion collisions can have multiple conserved quantum numbers like baryon number, strangeness and electric charge. The diffusion process of these charges can be described by a diffusion matrix describing the interdependence of diffusion of different charges. This is estimated here from the Boltzmann kinetic theory for the hadronic phase within relaxation time approximation. Here, we impose the Landau-Lifshitz conditions of fit. This leads to, e.g., the diagonal diffusion coefficients to be manifestly positive definite. The explicit calculations are performed within the ambit of hadron resonance gas model with and without excluded volume corrections. It is seen that the off-diagonal components can be significant to affect the charge diffusion in a fluid with multiple conserved charges. The excluded volume correction effects is seen to be not significant in the estimation of the elements of the diffusion matrix.

Primary author(s) : Dr MOHAPATRA, Ranjita Kumari (Banki Autonomous college)

Presenter(s) : Dr MOHAPATRA, Ranjita Kumari (Banki Autonomous college)

Session Classification : Parallel Session IB (Chair : Prof. Abhijit Bhattacharyya)

Track Classification : QCD at high temperature and/or high baryon density
